Electronics Australia

**Australia's Top
Selling Electronics
Magazine**

Jam-packed each month with news of the latest exciting developments in video, TV, hifi, computers and car electronics. More for the hobby enthusiast, too: easy projects to build, articles on how things work, circuit ideas and lots more . . .

EA has plenty of good "meaty" technical information for the engineer and technician, as well. Details of the latest advances in components, production techniques, test equipment and so on. A great way to keep on top of your job!

But that's not all. Every month there's also our regular departments: interesting stories from the Serviceman, lively discussion of topical technical controversies in Forum, a timely newsletter from Silicon Valley, CD record reviews and so on. . .

Look for it each month at your local newsagent or subscribe now by phoning (02) 693 9517 or 693 9515

CONTENTS

WHAT YOU'LL FIND

You'll find programs galore for just about any purpose in this all new issue of *Your Computer* magazine's **Bumper Book of Programs**. There are games, games and more games, as well as handy little utilities to help you in your programming and — even one that will give you your biorhythm! We hope you get hours of enjoyment from the programs published. Happy programming!

BUMPER BOOK OF PROGRAMS was published by The Federal Publishing Co Pty Ltd. Printed by Hannanprint, 140 Bourke Rd, Alexandria 2015. Distributed Nationally by Newsagents Direct Distribution Pty Ltd *Recommended and maximum price only. ISSN 0725-3931.

INTRODUCTION

WELCOME to an all new issue of *Your Computer* magazine's Bumper Book of Programs! We began publishing readers' programs in a special feature called Pocket Programs back in December 1982. But, as popular as they were, by mid-1987 we felt we could better 'inform' our readers and help them learn by publishing programs with detailed explanations and programming hints and tips, and background articles.

The biggest source of problems that reader's have had with the programs in earlier issues is fingers.

This idea gave us the most popular articles we've ever published: Roy Hill's 'Coming Forth', an overview of the Forth language (May and June '87), and Peter Hill's eagerly followed 'Turbo Tips' series, which started as the two-part 'Twenty Turbo Tips' in late '86, and is still offering hints and shortcuts to Turbo Pascal enthusiasts. Interested in programming graphics? That's exactly what our current 'Graphics Techniques' series is for. Or assembly language programming for the 80x86 family? Try John Summerfield's 'The Attainment of Assembly.' Like to know about a multitasking Basic? See our August '87 issue. In fact — see *every* issue if you're interested in programming, because we are too!

And, our Apple, Amiga, Amstrad, Atari, C64, IBM, Macintosh and Microbee columnists all offer specific ideas for programming with their machines, of course.

Just because we stopped publishing Pocket Programs, didn't mean that

readers stopped sending them in — we've been embarrassed by the deluge. So, the solution was obvious: tip them all into an all-new release of our *Bumper Book of Programs*.

Inside you'll find programs to amuse four year olds and programs that can be used in business; technical programs and games programs. They've been written by learners and by old hands, aged fifteen to seventy, living just about anywhere you can plug a computer in.

While most of them were written specifically for a particular machine, almost all of them are written in some version of good old Microsoft Basic. Which means — just because it's in the Amstrad section, doesn't mean you can't use it on your Vic 20 (with a little bit of modification). It's simply a matter of converting the peculiarities of your machine's Basic to Microsoft Basic — if you've got a word processor it's a quick search-and-replace. (Note: this won't work 100 per cent of the time — but finding out why it doesn't work on your machine is half the fun of computing.)

To help you get these programs running, we've prepared a Basic Conversion Chart that shows the Microsoft Basic equivalent of the Basic used on most popular (and not necessarily new) machines — you can convert MSX Basic programs to run on an Apple II (or vice versa), for example. If you need the Chart, simply send \$4 (cheque or money order), to *Your Computer's Basic Chart*, PO Box 227, Waterloo 2017 NSW.

The biggest source of problems that reader's have had with the programs in earlier issues is fingers. So — here's a few tricks that we've found useful:

First, place a ruler under the line you're typing to mark your line. You don't want to start typing the wrong line part way through another, or skip a line, or type the same line (or lines) twice, all for the sake of a ruler.

Next, check the data in data statements very carefully. When you type

in 'normal' commands, mistakes are fairly obvious. For example:

```
IB A>0 THEN ABROT
```

is a lot easier to correct than —

```
1000 DATA 143,233,233,087,323
```

A quick check is to count how many numbers should have been typed in and how many have been typed in. It's also very handy to have someone read the programs to you while you type them in — this is not only the quickest way, it's the most accurate. (It might just make your spouse, kid sister or father feel wanted, too.)

After you've typed in a program, it may return an error. When you find the line that's causing the error, don't just look at it and think, 'that seems OK.' Check it by reading it *backwards*, character by character — this is most efficient at picking up mistakes if you read it out loud while someone else reads your typing.

If you're still having problems finding an error, another trick is to put a trace on the execution to follow the path the program takes. This is particularly handy if your program goes into an endless loop. Many Basics have the command TRON, which will show the line numbers as the lines are being executed, which a great help. Another hint is to liberally sprinkle PRINT statements in the programs as you type them in. These can tell you all sorts of things about the program as it executes — for example, they can just say 'Hi, I'm at Line 100 and haven't crashed yet!' or, they can give the value of the variable in the line (found with TRON) that seems to be causing the crash: 'The value of C is 20.'

With these few debugging tools, you should be able to work out most of the problems you're likely to face (after all, all of these programs worked for the authors!). Of course, there's always going to be that insidious, invisible bug that crawls into the work of everyone from unranked beginner to seasoned programmer. Sometimes things can get very com-

plicated with computers, but far more often they are extremely simple. Often, the solution is to get a second opinion — an obvious mistake you've been trying to find for hours frequently hits a second person in the eye on the first read through.

But — the best advice anyone can give is to join a computer club or user group. Not only will you meet people with the same interest as yours, but you'll also have a source of expert (well, more experienced, anyway) knowledge that can be invaluable after you've spent a fruitless weekend trying to debug a five line program. We've included a complete listing of User Groups, and it's updated from time to time in *Your Computer*.

After you've tried some of the programs in this book, we hope you'll try your hand at writing your own — few things are more satisfying than your own work. After all why buy a database, when you can write your own (and you'll certainly learn a lot more!). One of the best ways to start learning is to experiment — try changing variables in a program to see what that does, for example.

Soon, you'll discover how easy it is to program simple games like Pong or Hangman . . . and you're on your way. *Starwars, lookout!* □

Do computers play any part in your life?

If they do — or if you just want to find out about them — don't miss each month's issue of

your computer

MAGAZINE

FOR BUSINESS AND PLEASURE

A magazine for all computer users and enthusiasts, **YOUR COMPUTER** has something for everyone — topical features on all aspects of the computing world, expert reviews of the latest software and hardware, up-to-the-minute information for business people, and even games and advice for hobbyists.

NEWS

YOUR COMPUTER brings you all that's interesting, innovative and inventive in the microcomputing world — news of products, plans and politics to keep you up-to-date with what's going on in this fast-moving industry.

REVIEWS

The latest machines and software from all the computer manufacturers are reviewed each month in **YOUR COMPUTER**. Keep informed about what's available, and use our reviews to help you assess which products are right for you.

TUTORIALS

YOUR COMPUTER's tutorials include regular series on such popular subjects as the BASIC programming language and dbase. Other regular tutorial subjects are Turbo Pascal, Networking, Artificial Intelligence and Graphics Techniques — all invaluable aids in making your micro work.

PROGRAMS

YOUR COMPUTER regularly publishes all kinds of programs written by both professional programmers and readers, and ranging from games to business uses, utilities to additions and alterations to well-known programs.

All **YOUR COMPUTER's** articles are written in everyday English, not computer jargon, so even if you're a beginner there's something for you in every issue. And our regular columns on all the popular brands of microcomputers are packed with enough information to get any newcomer straight into the exciting world of computing.

At \$3.50 — less if you take out a subscription — **YOUR COMPUTER** is going to cost you a lot less than its overseas rivals — and provide you with the latest information on the computer scene in Australia at the same time. Look for it every month at your newsagent.

BASIC

INVOICE.THR

This program can be used at work or home. Originally designed as an invoice or receipt maker, it may also be used to write an informed shopping list.

It is, of course, designed for one particular invoice style (not a bad style at that), but you will probably need to alter its format for your particular usage. For instance, if you intend to make shopping lists you will not need two copies of each list, and the address, name of business and dates would be irrelevant. I'll leave it up to you how you alter it to your style.

After typing in and saving, run the program. You will be asked on what date the order was received. The date may be entered in any form (for example: 3/4/86, 3rd April 1986, the first Thursday in April). The program does not check for any particular form. The next input is date sent. If you type nothing (just press Return), the default value is the received date.

The second section is where you chose your invoice products. The screen will display a page of your products at a time. As many pages as your memory will hold can be added to the program. Just alter the value of N in Line 110 and add your data to the end of program. N must be a multiple of 20 minus 1 (for example: 19, 39, 129). To move through the pages, the Return and Back Space keys can be used. Return moves you forward a page, Back Space back a page.

Once the page you require is on screen, type the letter which is beside the product you need on your invoice/shopping list.

00587 REM

```

You may remove the entry described as Last Entry by pressing **Del**; this is for correction purposes. Products you have chosen so far for this invoice are underlined on the screen. If you rechoose one of these, you will be asked whether or not you wish this entry to be separate to the last entry of the same product.

For those of you intending to use the program for shopping lists, there is enough space in the Price Per Unit column to write in how much it actually cost. So you can update the program, as inflation makes older prices outdated.

CURSOR.ONE

Cursor is a machine code routine. It allows you one of the more useful functions of other computers, a copy cursor.

A copy cursor is available on many computers (Apple, Amstrad, BBC and so on). You can use it to cut down on typing, and vastly improve your editing abilities. It is, in fact, a second cursor which may be moved around the screen.

Place your finger on the Tab key and while you hold it down, W, Z, A and S will move copy cursor up, down, left and right respectively. When you have located a section of the screen you wish copied, press Esc. Each press will copy one character from beneath the copy cursor and enter it just as though you typed it in.

Cursor.One can be useful when typing similar lines in a program. Also, it may be used to combine program lines to conserve space and increase speed. You may use it instead of the Edit command; just list the line so you can add and remove large or small chunks of the line with a lot less fuss.

The program comes in three versions: a source file for those with EDASM, so they may alter the routine to suit their needs and two Basic programs, one for 16 Kbyte and one for 32 Kbyte. The Basic version should be typed, run and then saved. Preferably, use monitor to save the routine, type —

D "CURSOR" M 3F80 3FF3 3F80
(for the 16 Kbyte version)

D "CURSOR" M 7F80 7FF3 7F80
(for the 32 Kbyte version)

Now whenever you feel the urge you may load Cursor.One and it will automatically turn itself on.

STARS.SEV

All aboard... Come for the first manned space flight beyond the solar system, to the distant star cluster named, 'Distant Star Cluster.' This program takes you into the depths of space and time heading into the middle of a star cluster which you always get closer to but never seem to reach. It simulates stars of different colours and brightness flying past as you head toward the cluster at the speed of light.

You can have any amount of stars in the cluster that you want (providing you don't go over the memory limit) by simply changing the value of the variable 'star'.

The effect is created by a loop which contains the star co-ordinate and its direction continuously having the same number of stars on the screen given by the value of star.

Experiment with different numbers of stars. The result can be quite spectacular after a few screens.

*M. Kostecki & P. Vermeer
Elizabeth Park SA*

CONDENSER

If you're like me you love colours in programs, but are put off mode by the character size. So you just compromise and use mode 1 which has only four colours. Well, I don't believe in compromising with computers. You're the boss, not it. And it should stay that way. Therefore, I produced a program called the Condenser, which condenses the characters down to the next mode, and in the case of mode 2, I just halved the characters size.

This program has many uses for the programmer and is great for the graphics enthusiast with its full use of colours.

If you like cramming a lot of information onto a screen, Condenser is just for you. You can put twice as many characters on screen as usual in any mode.

It has proved very useful in programming and we think you'll find it will do the same for you.

*M. Kostecki & P. Vermeer

MATCH.FIV

This program is great for the teacher or just for entertainment — it can be used for matching almost anything you can think of, such as opposite words, animals and their young, morse code and letters, or if you're good enough, even computers and their benchmark speeds. In this example, there is a list of 23 countries with their capital cities. This is very good for the school teacher who needs copies of a test for his or her class. And, the kids at home can have good fun while learning something at the same time.

The screen splits into two sections. It prints the countries on the left side and their capital cities on the right. An arrow points to a country and another continuously moving arrow moves down past the cities at a rapid rate. You have to be quick to press a key, at the brief moment when the arrow is in alignment with the city. Your score is calculated by how many presses of the key it took you to go through all the countries and cities. There is also a timer added so you can try to beat the record score.

PERSON.FOU

The day of the computer shrink is close at hand. And as it gets nearer, you will find many programs about psychology popping up from everywhere. This entertaining program should prove interesting to your guests, while providing them with a few laughs also.

Three verses are cited with a list of interpretations. You must pick the interpretation that best fits the verse, showing innermost psychological traits. Once you've determined the interpretations, you get a run-down of your personality.

This program is based on psychological research but don't take it too seriously. However, computer shrinks have already been used on patients giving an overall psychological analysis.

BIORHYTHM

This Biorhythm program demonstrates how Quick Basic can be used to write a program without line numbers. The program is made up of Functions, the main program, and then subprograms. The two functions following return integers due to the % as in FNd.cycle%. The parameters passed to the function are age.days% and period%. The integer variables age.days%, and period% are local to the function. Any variable not passed is global unless specifically made local with the STATIC statement.

A black and white photograph showing a person's arm and hand holding a book. The book is open, with the left page showing a dark cover with some text and the right page being a light, textured surface. The person's arm is visible at the bottom, wearing a dark sleeve. The background is dark and indistinct.

This image shows a vertical, rectangular surface with a fine, woven texture, characteristic of book cloth or heavy paper. The color is a uniform, slightly mottled gray. There are subtle variations in tone and texture across the surface, with some areas appearing slightly darker or more worn than others. A small, dark speck is visible near the bottom center. The overall appearance is that of a blank, aged, or textured material.

AMSTRAD

FLASH

Have you ever wanted to have unlimited power at your fingertips? Well, this program is not that good but it does simulate a sort of magical touch.

Every time you touch a key a simulated lightning flash of multicolours scans the screen, almost blinding you. The same happens when you use an operation. Only it lasts longer.

Try (cat) and watch the result. It creates an electrical storm. This is a good program to trick your friends with. You can tell them that your computer is playing up. Then tell them to press a key and watch their reaction. It's quite amusing.

It's also good to test out your sunglasses.

BOUNCE

This is an excellent program for physics enthusiasts. Remember the days in school when you tried the experiment with the strobe light, the golf ball and the camera, to see the effect of distance against time? Well, you can forget that primitive way of deriving a result. This new Bounce simulator does it all for you — plus more.

You firstly specify the initial velocity of a ball thrown straight up in the air, measured in metres per second. Then you put in the co-efficient of elasticity for the ball, which is a measure of the bounciness. For realism you have to put in a decimal fraction under 1. This is because no ball can bounce higher than the place from where it was dropped. If you put in 1 this will make it bounce just as high as where it was dropped from. You can experiment with numbers larger than 1 to get some interesting results, but you can't rely on these results as it's a contradiction of the law of kinetics. The next input is the time increment for the strobe. This is the space of time between each simulated flash on the ball.

When the information has been entered, the screen is drawn up, comprising a graph of distance versus time filling the screen, with a box in the top right

hand corner showing your input. The information is then simulated into graphics giving you a pictorial view of what you want.

This program saves a lot of time and setting up, not to mention film for all the blunders that are destined to occur.

MATRIX.EIG

Homework, homework, homework... that's all you seem to get, isn't it kids? I know the feeling. I had it up to my ears, especially maths. However, have no fear as Matrix Solver is here.

This life-saving program solves any matrix operation you may ask with the greatest of ease, which is a bit different from the long agonizing minutes on one question done manually. The functions are as follows:

- a) Matrix multiplication.
- b) Scalar multiplication.
- c) Matrix addition.
- d) Matrix subtraction.
- e) Row reduction.
- f) Determinant finding.

You simply enter the matrices and the function you want performed and wait a second for the answer.

These are only a few of the functions that can be performed. By using other direct functions you can come to the answer. For example, to subtract you would multiply the matrix by negative one and add the other matrix.

The good thing about this program is that you don't have to know anything about matrices. Nothing at all! That is, of course, except for the question. The program is not only great for kids but also the teachers as well. You teachers out there, don't you

hate the arduous task of working out the right matrices to an answer for a test or exam? This work can be halved by the matrix package. Using the functions you can enter the desired answer and the computer will manipulate it for you.

This program is easy to expand on if your requirements are not met, and if you don't have an Amstrad, no need to panic, as Matrix will work on most Basic computers.

BRICKS

Bricks is a game where you must knock down a row of bricks with a 'ball'. You use the joystick or keyboard to control the 'bat' to hit the 'ball'.

Pressing 'Q' moves the bat up while pressing 'A' moves the bat down. 'Y' or pressing the fire button restarts the game.

CHASE

This is quite an entertaining game which will pass the time quite quickly. Five wild dogs have been eating the chickens from your farm and you haven't been able to shoot them yet.

So you've set a trap for them. You did this by erecting an electric fence of death-high amperage, around a field, hoping to capture them in there. However, as you turn to walk out the gate and wait for the dogs, they walk in and the wind blows the gate shut... You're trapped in with them.

Fortunately, the dogs haven't eaten for a while and are sick from starvation. This means that they can't run very fast. The fastest they can run is equal to your speed and they can't suddenly stop. They have to slow down for quite a few meters before coming to a halt.

You have no weapons so the only way you can kill them is to somehow make them run into the fence. This is done as the diagram shows:

ELECTRIC FENCE

The dogs, when next to you, move in the same direction as you so as to create the least distance between you and them. Therefore, you can run them into the fence blocks.

There is a neat setup for the screen with the field in the middle and just to the left of it, a map of direction keys. These keys are the number function keys, or if you want more of a challenge, try the normal numbers.

If you answer 'no' to having another game at the end of the program you get a summary of the whole set of games you played. The summary includes how many games you won, how many games the computer won, your average and the computers average.

Experimenting may give you interesting results. For instance, change the amount of dogs from five to ten and then try to play. That's what I call challenging!

CHARACTER ENLARGER

Don't you get annoyed when you sit down to draw up graphics for enlarged characters, knowing its going to take you at least three hours, and a lot more if you have a lot of characters? Why, if you wanted to do the graphics for the entire alphabet — only 5 times larger, it would take about 15 hours.

Character Enlarger eradicates the need for this wasting of precious time, by doing it all itself in the space of a few seconds. You simply type in the letter, location and size (relative to the normal size), and it draws it up in which ever colour you specify.

In the adjoining program, the subroutine is the part which does the actual enlarging of the characters and the rest of the program is a demonstration. Therefore, you only need to type the subroutine into your programs.

The demonstration is very striking to look at. You type in the sentence you want and the size and sit back watching the program go to work in front of your eyes.

*M. Kostecki & P. Vermeer
Elizabeth Park SA*

SPEED READER

This ...uh... sentence says ...um... this ... is a ... great ... um ... program — having trouble like this reading? No need to fear — this program gives you heaps of practice at reading, and after a while you may become faster than your friends.

Don't get me wrong. This is not a highly acclaimed medical program. It's not guaranteed. All I know is that it's improved the speed of my reading and that it will improve yours too, if you use it properly. Just half an hour every day should do the trick.

Now you probably don't even know what I'm babbling on about because I haven't even talked about what the program does yet. Don't worry, we'll now rectify that situation.

The screen is set up as in the adjoining picture. The sentence of your choice moves from the

right hand side of the box to the left very quickly. You're then asked to type in what that sentence is. If you're wrong, the sentence repeats the sequence but at a slower pace. This routine continues until you get it right. When you do get it right, the computer tells you how many 'specks' it took you. Specks are a measurement used by me, the programmer.

The best thing to do is get someone else to type in a sentence for you without your seeing. This means that you don't know what it is and you can't cheat. Or, by slightly modifying the program you can make it easier. By adding some data in the form of sentences the computer can randomly pick out a sentence to test you on.

Anyway, I hope you succeed as reading can be the greatest enjoyment in the world.

AMAZING ADVENTURE

You are Trasher, a famous adventurer. It is your mission to blow up the residence of an evil ruler, Antrax. He rules the once peaceful village of Partomina, which is in the other side of your planet. You are armed with a sword, plate mail armour, shield and a backpack. Your transport is a black stallion who you call Thundar. Good luck on your adventure.

NUMBER RUNNER

Okay space cadets, you've saved the Earth before, and here's your chance to save it again!

Unfortunately the Cray super-computer that normally handles the Earth's defences has broken down. Luckily you had your Apple on hand, so you connected it to the defence systems just before the attack. Due to the fact that your Apple doesn't have the processing capabilities of a Cray, the defence systems need your help!

Your screen will show the aliens (called runners) as they attack, but the computer can't work out the code that is required to break the aliens' force field thereby destroying them. Instead an equation will be shown, and you will have to use quick mental arithmetic to work out the code, before the runner reaches the left side of the screen. You have three lives with which to save our world — GOOD LUCK!

The keys used are:

A — to move laser up,
Z — move laser down,
Return — fire laser,
0-9 — enter code number,
/ — clear code number,
Esc — pause and
Ctrl-Q — quit

Once run, a scrolling front page will be presented, but when you press a key, the screen will clear and you will be confronted by a menu.

'TYPE' refers to the type of questions you will encounter. Inputting a '1' and pressing <RETURN> will roll the type of questions between addition, subtraction, multiplication, division, and a mixture of the above. 'SPEED' refers to the speed at which the runners move. The speeds allowed are between 1 and 10, where 10 is the fastest speed.

'SKILL' refers to the skill level (how hard the questions are) and is also a number between 1 and 10, where 10 is the hardest.

'RUNNERS' refers to the maximum amount of runners on-screen at one time. The maximum amount is 12, yet the game becomes way too slow. Pressing '5' will then start the game.

This program can even be modified, without too much trouble, to teach spelling instead. The questions could be incorrectly spelt words, while the code would have to be the correctly spelt word. Geography can

also be taught; where capital cities are the Runners, and the code is the associate country. In both of these examples the question and answers could be stored as DATA statements.

The program can be split up into separate parts:

Line 40-110 — Update runner positions.

130-250 — Check keyboards.

270-400 — A shot is fired — hit or miss.

420-440 — Score update.

460-790 — Generate questions and answers.

810-1060 — A subroutine to do while pausing the game.

1080-1400 — A hit! — a runner made it all the way across the screen.

1420-1530 — GAME OVER — update high score if required.

1550-1770 — Generate a border around screen — and set the text window inside it.

1790-2020 — Print scrolling front page.

2030-2200 — Input the category.

2220-2270 — Initialise variables.

2280-2310 — Subroutine used in scrolling the front page.

RAM SAVING AND LOADING ROUTINE

This routine allows blocks of RAM anywhere in memory to be saved on disk or for programs loaded into any place in memory. It may also be used to save or load machine language programs, sprite data, character sets or hires and screens. The saving/loading is done by means of machine language routines which use the Kernal subroutines SAVE, SETLFS, SETNAM and LOAD.

The length of the filename is stored in location 2. The pointers to the start/end of RAM are stored in locations 251-254. The file name is stored in memory starting at 49152.

MULTICOLOUR SPRITE EDITOR

The Multicolour Sprite Editor can be used to edit, view, save or load a multicolour sprite and print or view its data.

A joystick in port 2 must be used to actually edit the sprite; use the four directions to move the cursor around and use the fire button to set a point.

Sprite colours can be changed by using the 'set sprite colour' option. While editing the sprite, colours can be changed using the function keys (plot colours):

F1 — multicolour 1
F3 — sprite colour
F5 — multicolour 2
F7 — blank (background colour)

The 'Print/view sprite data' option allows the 63 bytes of data which make up the sprite to be printed or viewed. The 'View actual sprite' option displays the sprite you are editing in its actual form. It gives an idea of what it really looks like in expanded and regular form.

The 'Save sprite' and 'Load sprite' options allow a sprite to be saved or loaded in the form of a sequential file on disk (alter lines 830 and 930 if using tapes). The program uses three sprites; sprite 1 is the regular sprite, sprite 2 is the expanded sprite (sprite 1 and sprite 2 are used in the view option, sprite 3 is the cursor in edit mode).

The cursor in edit mode shows the current plot colour as well as the background colour.

Three arrays are used:

SD(21,12) — contains one element for every pair of bits in the sprite. Each element represents one dot (from 0-3).

MD(63) — contains the actual sprite data.

C(4) — contains the four plot colours (CE holds the cursor colour).

Each time the fire button is pressed while editing, the SD and MD arrays are updated.

MINOTAUR MAZE

The game Minotaur Maze starts by drawing a random maze on the screen then placing a treasure (\$ sign), the Minotaur (a user defined character) and a man (another user defined character) in the maze. The object of the game is to move your man to the treasure and back to your home corner, whereupon another treasure will appear.

The Minotaur moves at random until your man secures the treasure then the Minotaur actively pursues him. If the Minotaur catches your man the game ends. Your score depends on how many treasures you get and how long you stay alive. The maze drawing routine is slow but interesting to watch — so be patient.

THIRTY STAGES

This game is for the BBC Micro. The object of the game is to get from the battlefield to your home base. Although it sounds easy you'll have to deal with bandits who try to steal your gold. You start off with 100 gold bars; when you reach home base you should have at least 5 left. The rest of the game is explained in the listing.

*S. Vrakatselis & D. Mckenzie
Launceston Tas.*

MICROBEE

CONVERTER

Converter is a program selection menu with some special functions. These include: erasing files, renaming files, loading files on other disks and so on. This program is for the Premium Series Microbee and if to be used on standard Microbees the 'HI-RESZ' statements should be changed to 'HIRES'.

FROGS LEGS

Frog's Legs is a game where you are caught in a marsh with a pair of frog's legs. These legs are in a terrible mood as they have lost their body, therefore everyone they see, they try and kill. See if you can get to the top of the screen without being munched.

You cannot run through any bush, but you are armed with a weeding wand which you can use three times only. You use the wand, when you have no way of getting past the frog's legs, by pressing one of the four keys in the diamond I-J-K-M; I kills a weed above you, M below you, J to the left and K to the right. Movement is achieved by using the keys < for left, and > for right, Q for up and A to go down.

*G. Heathcote
Ingleburn NSW*

MAZE SEARCH

This game is something a little different which I wrote about two years ago. By using (, /, ; and @ for up, down, left and right respectively, we manoeuvre around the maze quite blindly using memory and logic as our navigation. If you must cheat, press H for a hires locator plan (the target flashes), but this will cost you. The more you wander around, the more points get chewed up! Replenish your score by swallowing (spacebar) the spots when you find them. Use the REMs for a title page of your own design (I'm too lazy!)

*F. Gonzalez
Edinburgh SA*

```

HORSE RACE

Horse Race, as its name suggests, is a horse racing program for the Microbee. It features excellent PCG graphics and can handle up to six players. To play the game, enter the number of players and their names and start betting. The game ends when all players are broke or all but one are broke.

What determines whether a horse wins or not? It's a combination of the horse's odds and randomness. Line 820 in the program controls this. You can also change the horses' names by changing the data at line 1160 to 1180 — but be sure there are six names in total!

HORSE RACING

AND THEY'RE OFF!

PICK A CARD

This program will allow a computer to select any randomly chosen card from a standard deck. The player just has to answer 'yes' to the computer's statements as they appear on the screen.

The secret is in how the operator uses the space bar when answering. If the space bar is used, then the program will branch to the appropriate routine.

For example, if the chosen card is black, then the answer to 'Have you chosen a card?' will be 'YES—' (extra space). This will cause the next statement, line 305, 'Your card is black, right?' to appear.

Run the program and study the listing and you will soon see its operation. When you've got it right you will confound your friends.

The sub-routine at line 1000 is simply a ruse to waste time in order to give the player the opportunity to think about his or her replies to the computer's statements.

TRS80/CoCo

MICROBASE

This program allows you to use your computer as a super efficient filing system. You can file cards, edit them or search for a word or part of a word on any card.

With Microbase you can 'tailor make' your own filing system as long as you use 10 headings or less on each card. You are not restricted by set headings. Each filing system is stored along with its cards as a machine language file, so that you can load and use one filing system after the other.

Microbase has a main menu and a card menu. The main menu allows you to -

1. Set up a new system.
2. Load system files.
3. Save system files.
4. Flick through files.
5. Search.
6. Insert new card.
7. Print entire system.
8. Retrieve stores files.

The card menu will allow you to flick backwards (<A), flick forwards (>S), stop at that card (pause), print out that card (hardcopy), alter that card (edit), return to the main menu (menu), remove that card (delete), or continue searching (cont).

To set up your own filing system, you simply choose option 1 from the main menu and answer the questions. The main heading that you are asked for is the heading that will contain the card entry to be alphanumerically sorted.

Once the parameters for your system have been set, you will be returned to the main menu. From there, you should choose option 6 to insert your first card into the system. You then need to enter your information under each heading. When that card is complete, you will be shown the card with the card menu at the top of the screen. You should now press M to return to the main menu and insert a new card. Each new card is inserted in its correct place according to the information under heading 0 (the main heading).

When you have finished inserting all your cards, you should flick through them, controlling the flicking with the keys A (left), S (right), and P (pause). (The A and S are a remnant from the MC-10 which has arrows on these keys, but there should be

```

no confusion since all options are shown on the screen.) If you find a mistake on one of the cards, you can edit it by pressing E when the card is displayed. In edit mode, you just need to enter the correct information for the desired heading.

The next stage is to save the system and file cards to tape. this is done from the main menu and the file is CSAVED under the system name.

Once this is done, you can load and update the filing system at any time. Searching for a word, phrase or part of a word within the filing system is simple and fast. You can ask the computer to search through all entries for an individual heading or through the entire system. Once the card is found, it is displayed. Pressing C will allow the search to continue for other cards with the same string in them.

If you have to BREAK and SKIPF to find a spot on the tape, then you should re-enter the program with GOTO 1 <ENTER>. If you RUN the program then the files will be cleared. If you forget and RUN instead of GOTO 1, then all is not lost. You *may* be able to retrieve the files using OPTION 8 from the main menu. Note that triple speed pokes are found in Lines 2065, 2165, 3015 and 3215.

MATHS TEST MATCH

Maths Test Match is a maths drill program made into a game of cricket. To make some runs you have to know the right answers, and speed does help up to ten can play at once.

And here's a tip for the CoCo users: you can use "Exec 44539" in place of "AS = Inkey\$: if AS="Then". As you can see it is a much shorter line, this helps to save on memory.

J. Sheen
Morwell Vic.

BANDIT

Bandit is a computer simulation of the one-arm bandits found in most clubs — and it's just as hard to beat. The main difference being that you get to keep your shirt.

REVENGE OF THE TOOTHLESS VAMPIRE

You must help poor old Cedric. The Toothless Vampire collect his false teeth and get out of Wierdsville. But he must make the irate dentist happy, who has lost his favourite reading material and an agitated priest who has lost his Bible. Cedric may also find some useful items in the Cafe, but the bouncer won't let him in.

Commands are entered using the standard verb and noun entries system. Some useful commands are (N,S,E,W), Climb/Up, Down, In, Get/Take, Score, Praise, Inventory, Spray, Help, Give/Drop/Leave, Wait, Pull, Wear, Remove, Hit/Smash and Unlock.

Converted from the BBC original by Jimmy Fang.

*J. Fang

BLACKPOOL TOWER

You have been locked inside the house by your aunt who's up the street shopping. Being young and adventurous, you wish to get out and see the famous Blackpool Tower. You have to collect objects in order to gain entry into the Tower, where admission costs 50 pence. There is a roaring fire in the lounge which has to be contended with and a snake loose in the garden. If you ever get out, you'll have to watch the road, because you are only seven and cars are still a health risk to you.

Commands are entered in using standard verb and noun entries. Original Oric program by D. Reynolds and published by *Computer & Video Games*, UK. The Vic 20 conversion is the copyright of Jimmy Fang (1986).

CAMEL

You have to travel 200 kilometers across the Gobi desert, trying to out-run the cannibals, who are chasing you. You must renew your water supply and make sure you don't run your camel into the ground.

Watch out for storms and wild Berbers which hamper your attempts to reach the relative safety of civilization.

All commands are typed in using a number. This program was converted from an Applesoft program. This Vic 20 conversion is the copyright of Jimmy Fang (1986).

PING TENNIS

A two player game of tennis with no net! You can move as close to your opposition as you like. You can also hit the ball into the walls on the sides. The first person to three sets wins. The first person to 21 points wins a set. Like tennis, you have to win the set by two or more points or the set continues. This game requires joysticks.

Because of my printers' limitations, I could not include graphics symbols in the program printout so here is a list of them:

CONCENTRATION

The program called Concentration and is based on the age old game of the same name. Between ten and fifty cards can be selected to appear on the screen. Behind these cards are randomly hidden pairs of cards. The game is finished when all the pairs of cards have been uncovered.

This program is a real test of your concentration.

L. Vella
Leopold Vic.

SUPER SNAKE TRAPPER

Super Snake Trapper is a two-player game of skill. You have to move your snake around the screen without hitting the walls, the other snake or yourself. If you do hit something your score goes down. If it reaches zero you lose. If you are about to crash you can press the fire button and you will be put somewhere randomly on the screen, but the computer might land you on something and you will lose points. Joy-sticks are required to play this game.

Because of my printer's limitations I could not include graphics symbols in the program print-out so here is a list of them:

line 15
"Shift A,Shift Y (x2),Shift S"

WORM

The idea of this game is to move from one side of the screen to the other without hitting the dots, the walls, or your own tail. If you do manage to reach the other side, bonus points are awarded before proceeding to a new frame.

BEZERK

Bezerk is a games program written for the VZ200/300. The idea is that when in playing mode you move a dot around the screen running through the red dots. If you do not reach the red dots in time and you touch them they will turn yellow and you *die!* Do not touch the walls or anything yellow. At the end of the game you will be given a bonus point for every red dot you ran over.

R. Banks & M. Saunders
Mackay Qld

ARGGGGH!

This exciting program written for the VZ220/300 requires a good deal of skill. Weave yourself in and out of the yellow dots, avoiding them and the walls, until a hole appears in the top middle of the screen. You are only allowed to go back on yourself a few times, so beware.

R. Banks & M. Saunders
Mackay QLD

ENCODE/ DECODE

Encode/Decode is an encoding and decoding program written for the VZ200/300. When run it will ask you to input a word or secret message. After typing in your secret message, on the line below will appear the message in code form. It will then ask you to input a secret message in jumbled form which it will then decode.

*R. Banks & M. Saunders
Mackay Qld*

```

```

RESTORE FILE

This is probably the most useful utility program ever made for the VZ200/300. After running out this program and typing in new, start typing in a program. Now type in new to erase the memory; type in PRINT USR(0) and *hey presto* your program is back in memory. This program is excellent if you're the type of person who gets angry with their programs.

CATCH

A lot of skill and patience is required to use this program. You must trap the other moving dot into one spot on the screen. To do so use the following commands -

W — up
S — down
K — left
L — right
E, R — to turn yourself visible and invisible.

Please note that the designers of this program takes no responsibility if you hit your computer through frustration and anger!

SHARP

GOBBLER

The aim of the game is to steer your man around the screen using the cursor control keys. For each dot that is gobbled you score one point. You score five points for each square gobbled. A round ends every time you score 200 points. If you hit a mine the game is over.

SORD

MEMORY MAPPER

This program allows you to examine a range of memory locations and to display the contents in both hexadecimal and character format (characters with ASCII values less than 32 are suppressed as they can do strange things to the display). The starting address of each line of display is shown at the left of the screen and byte numbers at the top and bottom of the screen. 128 characters at a time are displayed.

After each screenful, the program pauses for a key depression. Q terminates the run, R allows you to specify a new range, and another key continues with the present range. Once the range is exhausted, the program stops.

This program is useful for ferreting out secrets of the machine. Undocumented keywords I have found are:

POSTAD — (post-number) returns the address of the specified post number. Movement of a single sprite can be cancelled selectively by setting the returned address to 0 with POKE. This address is actually the start of a 5-byte sprite control table.

RDST\$ — a function; its purpose I have not worked out.

RETL — another function with a purpose I have not worked out.

TERMC, — a function with a value of 13, the ASCII value of an end-of-line (RETURN) character.

If anyone out there knows what RDST\$ and RETL do, please write in and share the knowledge!

H. Gunter
Hillary WA

Electronics Today

SOUND INSIGHTS

Free HI-FI magazine inside

Australia's most respected electronics magazine now includes Sound Insights, a monthly digest of news, views and reviews on audio equipment. If you take your listening pleasure seriously, then Sound Insights is a must.

Electronics Today International is the pre-eminent magazine for the electronic lifestyle. We follow the latest developments around the world, in computers, in the physical sciences, in audio engineering, in communications, and space technology. For the practical fanatic, we have a great selection of do-it-yourself projects every month. Read ETI for the best writing in any electronics magazine.

USER GROUPS

User Groups must be the biggest source of information for computer users of all levels of experience, as well as for those just thinking about buying a computer. Go along to a meeting — see what others have achieved with their machines.

Australian Capital Territory

ACT PC Users' Group, Nick Hammond, PO Box 188, Parkes 2600. Meetings last Monday each month at Reid Tafe, 8.00 onwards. (062) 86 1102.

ACT VIC-20 Users' Association, Chris Groenhout, 25 Kerferd St, Watson 2602. Meetings first Monday each month at Boys' Grammar Scout Hall, Red Hill, 7.30 onwards. (062) 41 2316.

Albury Wodonga Apple User's Group, Jenny Scott (secretary), (060) 24 3225 or Don McLennan (president), (060) 46 028; meets second Wednesday every month at Wodonga High School at 7.30 pm.

ATARI, Chris McEwan, co-ordinator, ACTARI, PO Box E112, Canberra 2600, (062) 88 7861.

ACT Apple User Group, S. Nielsen, PO Box 1231, Canberra, ACT, 2601.

Australian ZX80 Users' Association (AZUA), David Vernon, 50 Waller Crescent, Campbell 2601; for ZX81, ZX Spectrum and Sinclair QL owners. Meets on the last Wednesday of every month at the Woden Valley High School library at 7.30 pm.

Barrier MicroBee User Group, Michael Quinn, 69 Eyre St, Broken Hill, 2880. Meets the last Sunday of every month at the town library.

Canberra ACT Sirius User Group, Jim Bland, (062) 81 2824, (062) 81 2832.

Canberra Compucolor Club (CCC), Meets 7.30 on first Sunday of every month at the offices of Digital Equipment, 28 Lonsdale Street, Braddon ACT.

Canberra Microbee Users' Group, Meets 7.30pm on first Tuesday of every month at Woden Valley High School Library, PO Box 227, Weston Creek, ATC, 2611. (062) 71 6081.

Canberra Micro-80 Users' Group, Harry Cooper, 113 Owen Dixon Drive, Evatt 2617; meetings third Monday each month, 7.30 pm in the large theatre, 'I' Block, Reid TAFE, for System 80, TRS80 and similar. (062) 58 3700.

Canberra NEC Users' Group, Mal

Smith, PO Box 173, Belconnen 2616; meets first Tuesday each month at Main Conference Room, CSIRO Headquarters, Limestone Avenue, at 7.30 pm. (062) 54 1614.

Canberra Osborne Group, c/o Geoff Cohen, PO Box 136, Kippax 2615, (062) 54 7608.

IBM User Group, Ron Pollack (president), PO Box 5010, Sydney 2001. Meets third Monday of every month at the Esso Training Centre Auditorium Forum Centre, 35 Clarence St, Sydney, at 5.30 pm. (02) 29 7033.

Kaypro User's Group (ACTKUG), meets on the third Thursday of each month from 6.30 pm in the J Block theatre, Canberra TAFE, Constitution Avenue, Reid. Contact Des Ireland, on (062) 47 5330.

Micsig, Registrar, PO Box 446, Canberra 2601.

PC Users' Group (for users of IBM PC and similar machines); meets on the last Monday of each month at 8 pm in the main theatre, Building J, Canberra TAFE. Contact address: PO Box E188, Parkes, ACT 2600.

Sirius/Apricot User Group, M J Sim, 253 Hindmarsh Drive, Rivett 2611; meetings 7.30 pm third Tuesday each month, 88 Wollongong Street, Fyshwick 2609.

New South Wales

Albury-Wodonga District Microbee User Group, Eric Eulenstein, 202 Kooba St, Albury 2640, (060) 25 1601.

APF Users' Group, Norm McMahon, 288 Kissing Point Road, Turramurra 2074, (02) 44 2645.

Apple Team Australia, 5 Walpole Place, Wahroonga 2076; (02) 48 1018.

Apple Users' Disk Exchange Club, Phillip Donnadieu, Flat 1 8-10 Lancelot Street, Allawah 2218; (02) 579 4547.

Apple Users' Group, Colin Rutherford, PO Box 505, Bankstown 2200; meets 6.30 pm second Monday of each month (Tuesday after public holidays) at Syd-

ney Grammar School, Stanley Street, Sydney. (02) 520 0926.

Atari Computer Enthusiasts, Tony Reeve, PO Box 4514, Sydney 2001.

Ausborne, The Secretary, PO Box C530 Clarence Street, Sydney 2001; meetings third Wednesday each month at 6.30 pm, at Burwood RSL, 96 Shaftesbury Road, Burwood. (02) 95 5378. Bulletin board: (02) 439 7072.

Ausbug, Stephen Ford, PO Box 62, Londonderry 2753.

Australian Amiga User Association, provides a bi-monthly newsletter, news and reviews on software and hardware, hints and tips and howtos, and public domain software. Post to PO Box 389 Penrith 2750, or phone (047) 514 143.

Banana Coast Microbee Users Group, Ken Darby, 168 Sawtell Road, Toormina, 2452. (066) 531 439.

Bay Microbee Users Group, Wayne Herring, Box 308, Nelson Bay, 2315.

Bankstown-Fairfield Computer Group, Arthur Pittard, 36 Hubert Street, Fairfield 2165; meets 4th Wednesday of the month at Canley Vale High School, Prospect Road, Canley Vale at 7 pm, (02) 72 2881.

BEDBUG, Chris Fallshaw, Eltham College.

Blue Mountains Microbee User Group, meets first and third Friday of the month, at 7.30 pm at the Springwood Neighbourhood Centre. All correspondence to Joe McKay, Secretary, 25 Reserve Avenue, Blaxland 2774; (047) 39 3154.

Blue Mountains Homebrew Computer User's Group, Eric Lindsay (secretary), (047) 51 2632.

Bondwell User's Group, Ray Richards, 7/39 Ross Street, North Parramatta 2151, (02) 683 3940.

Broken Hill Microbee Users' Group, Peter Cotter, 533 Radium Street, Broken Hill 2800, (080) 88 1621.

Casio PB 700 User Group, Terry Gill, 27 Greenleaf Street, Wentworthville 2145, (02) 636 1652.

USER GROUPS

Central Coast Apple Users' Group, Charles Lee, (043) 67 6845 or Mick Tierney, (043) 41 9350. Meets first Tuesday each month at the Central Coast Grammar School, Erina Heights from 7.30 pm. (043) 84 3419.

Central Coast Microbee Club, Max Maughen, PO Box 36, Ettalong Beach 2257, first Tuesday every month at Applied Technology, West Gosford. (043) 24 2711.

Compucolor Users' Group, Tony Lee, 52 Cowan Road, St. Ives 2075, phone (02) 449 8824.

Cooma Microbee User Group, Phil Zikan, PO Box 92 Cooma 2630, (053) 52 2756; meets on the second Friday of the month.

Dataflex User Group, Roger Walker, (02) 699 3877.

dBase Users' Group, PO Box 3019, Sydney 2001; meets every second Tuesday each month at the Bird Cameron Training Room, 15th Floor, Bligh House, 4 Bligh Street Sydney at 6 pm.

DEC Personal Computer Special Interest Group, Maggie Alexandria, DEC Australia, Northern Tower, Chatswood Plaza, Railway Street, Chatswood 2067, (02) 412 5252.

Dubbo and District Microbee Users' Group, John Taylor, 18 Cunningham Street, Dubbo 2830; meets fourth Wednesday each month at 7.30 pm in the Dubbo High School Computer Room.

Griffith Computer Association, Ron Gauci, PO Box 425, Griffith 2680, (069) 62 5877.

Griffith Microbee User's Group, Rick Mines, 2 Edmondson Avenue, Griffith, 2680; meets the fourth Monday of each month at Neighbourhood House at 7.30 pm.

Hawkesbury Apple User Group, Secretary Steve Bennett; meets fourth Monday each month at 7.30 pm, Richmond Primary School, (045) 78 2195.

Hawkesbury Commodore Computer Club, Richard Farrell, 12 Inverary Drive, Kurmond 2757; meets fourth Tuesday of each month at 7.30 pm at Neighbourhood Centre, West Market Street, Richmond 2753.

Hawkesbury Microbee Computer Club, Peter Christie, 9 Potts Street, Richmond 2753; workshops 7.00 pm third Friday, and general meetings 7.30 pm first Friday of each month in the Microbee Network Room, Library Building, Richmond High School, Cnr Penrith and Lennox Streets, Richmond 2753. (045) 78 4613.

Hitachi/6809 User Group, meets on the first Saturday of each month, at 2 pm;

contact Robert Lohr on (02) 662 4150, after 6 pm for locations.

HP Desktop Computer Users' Group, Dr R W Harris, CSIRO Division of Mineral Physics, PMB 7, Sutherland 2232, (02) 543 3460.

Hewlett-Packard Users Group (HPUG), Darren Stokes, 3 Buckley Drive, Coonamble 2829.

Hunter Users' Group — All Microcomputers, Secretary, PO Box 39, Broadmeadow 2298; meets on the second Wednesday of each month in Room 308, Building W, University of Newcastle, at 7.45 pm. Membership is primarily Apple II oriented, but anyone with interest in micros welcome.

Illawarra Apple Core Secretary, Chris Haley, 358 Cordeaux Road, Mt Kembla 2526. Meets at 8 pm in the library of the Holy Spirit College Bellambi on the 4th Monday of each month.

Illawarra IBM PC Club — All IBM compatibles, Dick Adams (secretary), c/o John Lysaght Ltd, Delivery Code 29, PO Box 77, Port Kembla 2505; (042) 75 6721.

Illawarra Microbee Computer Club, Ronald Read, 49 Beatus St, Unanderra, 2526. Meets every 4th Monday at 7.30 pm, Wollongong Institute of Education, Northfield Ave, Gwynneville; (042) 95 1142.

Illawarra Super 80 Users' Group, Jim O'Grady, Chairman, PO Box 1775, Wollongong 2500.

Lotus Users Group (Sydney), Peter Philippsohn, Box 5010, Sydney 2001.

Macarthur Computer Users Association, Brian Cooper, 20 Hunter St, Campbelltown, 2560. Meets first Monday each month at Airds High School, Briar Road, Campbelltown 2560, at 7.30 pm; all machines are catered for. (046) 25 1146.

Macquarie Microbee Users' Group, Brian Thompson. Meetings first Monday each month at Denistone East Primary School at 7.30 pm. (02) 85 1659 after hours.

Macwest Users' Group, PJ Lynden, 11 Toohey Avenue, Westmead 2145. Services will include newsletter, bulletin board and public domain library. Membership \$10 per annum.

Maitland Microbee Users Group, Ross Bell, 42 Redbill Drive, Woodberry, 2321. (049) 332 972.

MEGS (Microcomputer Enthusiasts' Group), John Whitlock, PO Box 1309, Chatswood 2067; meetings third Monday each month at rear of St Andrew's Presbyterian Church, 37 Anderson Street, Chatswood 2067, (02) 638 1142. **Microbee Users' Club (Broken Hill)**, Peter Cotter, 533 Radium Street, Broken

Hill 2880, (080) 48 8813.

New England Microbee Users Group, CSIRO, Pastoral Research, New England Highway, Armidale, 2350. (067) 784 000.

Newcastle Microbee Users' Group, Heather Clarke, 31 Pokolbin St, Broadmeadow, 2292.

Newcastle Microcomputer Club, Angus Bliss, PO Box 293, Hamilton 2303; meetings 7.30 pm second and fourth Monday each month at Room G12, Physics Building, Newcastle Uni. (049) 67 2433.

Nightline, is an after-hours (10 pm to 7 am, seven days a week) computer information service, which provides local and overseas news, clues and reviews. Mainly for Apple users, but others are welcome. Offers around 20 different bulletin boards, and uploading and downloading facilities; phone (02) 528 8968. Sysop: Hamish Bowly.

NSW Primary School Microbee Users' Group, Mr Peter Stretton, c/- Hunters Hill Primary School, Alexandra Street, Hunters Hill 2110.

NSW 6800 Users' Group, 27 Georgina Avenue, Keiraville 2500.

Northern Beaches VIC User Group, E Tuxford, 161 Barrenjoey Road, Newport 2106, (02) 997 2467.

Northern NSW MICC Chapter, Alen Hartley, Durrabin via Dorriggo 2433, (066) 57 8160.

Open Access User Group, Steve Cook, Advanced Data Technology Pty Ltd, 1 Terrell Avenue, Wahroonga 2076; (02) 48 0511.

OSI Users' Group, Nigel Bisset, (02) 411 7142.

Ozbeeb User Group for the Acorn BBC Microcomputer, Meets twice a month at the Australian Film & Television School — Open Program, 3 Lyon Park Road, North Ryde — second Wednesday of every month at 7 pm (organised talks and demonstrations); 4th Monday of each month at 6.30 pm (general meeting). Annual subscription for full membership \$10.

PC Users Group, Janis Meyers, Box 5010, Sydney 2001. (02) 297 033.

Pocket Computer Users' Club, George Antonijevic; for those interested in pocket computers, whatever the brand. Meetings held on the first Wednesday of each month at 7.30 pm at the Woodstock Community Centre, Church St, Burwood 2134, (02) 683 4296.

President Computer Users' Group for owners of President and other IBM-compatible PC and AT computers. Meets on the last Tuesday of every month at the Hornsby Inn, (Claude Fay's Hotel), 29 Florence Street, Hornsby, from 8 pm.

Contact Raymond or Trichia Toms (02) 456 3756, or Rick West (02) 872 4177.

RAT Microbee Users Group, James Quinn, Box 207, Raymond Terrace, 2324.

Sega Users' Club, Jim Robinson — Penrith branch, (047) 30 1834; Jeff Wilson — Parramatta branch, (02) 684 4128.

Sharp PC-1350 User Group, contact Bob Hamilton, (02) 639 3637.

Sharp MZ-700 User Group, contact Terry Gill, 27 Greenleaf Street, Wentworthville 2145; (02) 636 1652.

Sirius/Apricot User Group, Mark Dickinson, Barson Computers; meets first Tuesday each month at 6.30 pm, Unit D, 55 Talavera Road, North Ryde 2113, (02) 888 9444.

Sorcerer Users' Group, President Michael Mannaz; PO Box E162, St James 2000; meetings third Friday each month at 8 pm in Greenwich Community Hall, Greenwich Road, Greenwich 2065.
